

Laptop power goes on but screen shows nothing

Posted by lenovoadmin - 06 Jan 2017 06:30

Hi,

If the fan spinning when switch on the laptop and no display this can be a problem with the memory. Try removing it putting it back and also if you have 2 memory cards try with one. Try connecting to a external monitor. If it works on a external monitor problem is with the inverter or LCD flex cable.
