Should I upgrade my RAM Lenovo IdeaPad U310?
Posted by lenovoadmin - 06 Jan 2017 08:34

_____

Upgrading your RAM from 4GB to 8GB is likely the best solution to your problem. Generally, "heavy-duty" programs like the ones you mentioned would need something a lot more powerful than a Lenovo Ideapad, and upgrading to 8GB is the best you can likely do with that given device. The only thing you'll want to be aware of is that opening your device will void the warranty, so be sure this is what you want before you proceed.

A user from the Lenovo forums described the process of removing the back panel to access the RAM as follows: "Basically you pry off the rubber feet, unscrew the 4 screws you'll find, then (VERY) carefully work your way around the space between the back panel and the silver plastic."
